

Material Safety Information for the Original Floating Action Goods

ESKESEN Floating Action Goods

ESKESEN Floating Action Goods are produced using materials that comply with the following safety standards:

- Heavy metals conform to EN71 Part 3 standards.
- Materials are free from toxic substances.
- PVC-free materials are used.

A complete list of excluded substances, including SDS documentation, is available upon request.

In cooperation with our suppliers, we continuously monitor the ingredients of our raw materials to ensure compliance with current standards and legislation.

General Information for Products

Based on current information from our suppliers and the formulation of raw materials used in production, the substances listed below are not used in production and, to the best of our knowledge, are not contained in the raw materials for The Original Floating Action products. Please note, however, that no specific analyses are conducted to detect these substances.
